Table 12. In work at-risk-of-poverty rate: total and by gender (2004-2009); in %

	2004	2005	2006	2007	2008	2009
Total	13.2	12.9	13.9	14.3	14.3	:
Men	14.1	13.8	14.7	15.6	15.8	:
Women	11.7	11.6	12.5	12.3	12.1	:

: data not available

Please note, that according to Eurofund report, *Working poor in Europe*, published by Eurofund in 2010 "If persons are at risk of poverty, this may not be simply because of low wages but because their wages are insufficient to maintain the income of the household in which they live at a certain level. Equally, a person can earn a wage well below the poverty threshold but not be at risk of poverty because the income of other household members is sufficient to raise the overall household income above the poverty threshold. Such a person is, therefore, not counted as being working poor as defined here. A person can have earnings well above the poverty threshold but, because they share a household with people who are not working, they can be counted as being working poor" (page 2 of the report; the whole report available at:
